

Manager Guide: How to Write Formal Scope, Strategic Initiatives & OKRs in Workable

This guide helps hiring managers complete three critical sections of a requisition: **Formal Scope**, **Strategic Initiatives**, and **OKRs**.

These sections ensure clarity, alignment and approval readiness.

1. Formal Scope

What this section is:

A concise description of **why the role exists**, what it is **responsible for**, and the **core areas it owns**.

Think of this as the *mission statement* of the job.

What good looks like:

Based on your internal examples, strong Formal Scope statements:

- Explain the *business reason* for the role (growth, complexity, new product, acquisitions).
- Summarise the main responsibilities and expertise required.
- Provide high-level ownership areas, not task lists — e.g., analytics product leadership, revenue accounting, or deal execution.

Prompts hiring managers should use:

- Why does this role exist now?
- What is the primary mission of the role?
- What 4–6 core areas does this role own?
- Who does it partner with?

Strong example format:

“This role exists to _____. It is responsible for _____ across _____ areas. The role will work closely with _____ to deliver _____.”

2. Strategic Initiatives

What this section is:

A clear outline of the **major programmes, projects, or priority areas** the role will lead in the next 6–18 months.

These describe *what the person will actually deliver* before metrics come into play.

What good looks like (patterns from internal examples):

Strategic Initiatives typically include transformation or capability building such as:

- Scaling telemetry analytics, anomaly detection and AI-readiness.
- Strengthening financial governance and audit outcomes.
- Standardising GTM content, onboarding, and enablement processes.
- Driving account segmentation, retention playbooks, RevTech automation, and enterprise SaaS upselling.
- Executing M&A transactions, market assessments, and integration planning.

Prompts hiring managers should use:

- What are the top 3–5 priorities for this role over the next year?
- What transformation does this role need to drive?
- What new capabilities or improvements does the business expect from this role?

Strong example format:

“Lead the transformation of __ by implementing __, improving __, and establishing __.”

3. OKRs (Objectives & Key Results)**What this section is:**

OKRs translate the role’s priorities into **measurable outcomes**.

- **Objectives** = the ambitious, outcome-focused statement
- **Key Results** = numeric proof that the objective has been achieved

What good looks like (patterns from internal examples):

Examples from various ITRS roles include:

- Delivering one new product capability per month with clear discovery metrics.
- Reducing month-end close time and documenting all finance policies.
- Standardising GTM messaging, centralising platforms, improving cycle time by 40%.
- Achieving revenue targets, expansion opportunities, and meeting quotas.

Prompts hiring managers should use:

- What are the 1–3 most meaningful outcomes this role must deliver?
- How can we measure success in numbers?
- What should the role achieve in the first 6–12 months?

Strong OKR structure:**Objective:**

“Achieve / Build / Transform __ to enable __.”

Key Results:

- “Increase __ from X to Y by DATE.”
- “Deliver __ by the end of Q__.”
- “Reduce __ by __%.”
